## Introducing *Convision!* Leading-edge luminaires featuring glare free lens technology.

Apart from all the other known advantages, LED lighting can be quite harsh on the eye in terms of glare, especially in retail stores where the focus is on highlighting products without too much concern for the customer's visual comfort.

*Convision* Lens technology resolves this problem by channeling the light emitted via the LED chip through a special lens creating an almost glare-free visual surface and in some fittings creating a "dark light" effect. It also reduces general light loss out of the fitting, so objects appear brighter with the same amount of lumens emitted. The new *Convision* lenses are available in track spots, downlights, and continuous line (E-Line) with a glare rating in some cases as low as UGR<19.

### Take a closer Look...

Convex microstructures on the lens surface inspired by nature, reducing contrasts and ensuring soothing light emission.
